Build a Secure, AI-Ready Cloud

TekLid helps organizations design, secure and optimize Microsoft Azure environments and turn enterprise AI ideas into production-ready solutions.

Cloud architecture, security, AI and cost governance — designed as one system.

WHY TEKLID

Cloud, Security and AI should not be designed separately.

Most consultancies hand infrastructure, security, AI and cost management to separate teams. The result is duplicated controls, late security reviews and AI pilots that never reach production. TekLid designs all four as a single architecture, from the first landing zone to the monthly cost report.

- Architecture-first approach
- Microsoft cloud specialization
- Security built in from the beginning
- Infrastructure as Code
- AI governance
- Cost-aware architecture
- Enterprise integration
- Pragmatic implementation

TYPICAL APPROACH

Infrastructure team

Security vendor

AI agency

Finance spreadsheet

Four owners, four toolchains, no shared model.

TEKLID ARCHITECTURE

Data & AI

Security & Governance

Azure Foundation

FinOps & Operations across all layers

One team, one code base, one operating model.

Four disciplines, one architecture.

AZURE CLOUD

Build a cloud foundation that scales.

- Azure Landing Zones
- Cloud Architecture
- Cloud Migration
- Networking
- Identity
- Infrastructure as Code
- DevOps
- Resilience

CLOUD SECURITY

Secure identities, infrastructure, applications and data.

- Zero Trust
- Microsoft Defender
- Microsoft Sentinel
- Entra ID
- Conditional Access
- PIM
- Microsoft Purview
- Security Assessments

ENTERPRISE AI

Move enterprise AI from experiment to production.

- AI Strategy
- RAG
- AI Agents
- Azure OpenAI
- Enterprise Search
- AI Applications
- Microsoft Fabric
- AI Governance

FINOPS

Control the economics of cloud and AI.

- Azure Cost Optimization
- AI FinOps
- Model Cost Analysis
- Rightsizing
- Budgeting
- Chargeback / Showback
- Cost Governance
- AI Unit Economics

Start with a focused assessment.

Fixed scope, senior architects, a written report and a prioritized roadmap within two to three weeks.

CLOUD

Azure Cloud Health Check

Starting from **€1,500**

2 weeks · remote or on site

SCOPE

- Architecture review
- Governance review
- Reliability review
- Cost review
- Prioritized roadmap

SECURITY

Microsoft Security Assessment

Starting from **€2,500**

2-3 weeks · read-only tenant access

SCOPE

- Entra ID
- Defender
- Sentinel
- Purview
- Security posture
- Prioritized remediation plan

AI

AI Readiness Assessment

Starting from **€2,500**

3 weeks · workshops included

SCOPE

- Business use cases
- Data readiness
- Architecture
- Security
- Governance
- Cost

FINOPS

Cloud & AI FinOps Assessment

Starting from **€2,000**

2 weeks · billing export based

SCOPE

- Azure spend
- Model usage
- Architecture efficiency
- Token / model costs
- Optimization roadmap

All assessments delivered remotely or on site.

From assessment to continuous operation.

01

Assess

Understand architecture, risks, opportunities and costs.

02

Implement

Design and deliver the required cloud, security or AI solution.

03

Operate & Optimize

Provide ongoing monitoring, governance, security and FinOps.

From project delivery to continuous optimization.

TekLid CloudCare

A retained architecture and operations service covering cloud health, security posture, cost optimization, architecture governance, incident support and AI operations, with a monthly executive report.

Essential

Single subscription, foundational posture.

- Monthly cloud health review
- Security posture score
- Cost anomaly alerts
- Quarterly executive report

Professional

Multi-subscription, regulated workloads.

- Everything in Essential
- Architecture governance board
- Incident support (business hours)
- Continuous cost optimization
- Monthly executive report

Enterprise

Multiple tenants, AI workloads in production.

- Everything in Professional
- AI operations & model cost control
- Named lead architect
- Extended incident support
- Custom reporting & SLAs

Governed AI assistants on your own Microsoft data.

Every solution follows the same pattern: Entra ID identity, permission-trimmed retrieval, Azure OpenAI inside your tenant, and cost telemetry from day one.

SHAREPOINT → RAG → ANSWER

Knowledge Assistant
Secure enterprise search across SharePoint, policies and documents.

TICKETS → AGENT → RESOLUTION

IT Support Agent
Help employees troubleshoot common technical issues.

SENTINEL → AGENT → SUMMARY

Security Operations Agent
Summarize incidents and assist analysts with investigations.

FABRIC → RAG → INSIGHT

Finance Intelligence
Explain spending, forecasts and financial variances.

HR POLICIES → RAG → ANSWER

HR Assistant
Answer employee questions using governed internal knowledge.

TECHNICAL DEPTH

Built on the Microsoft cloud stack, delivered as code.

Microsoft Azure

Azure Landing Zones

NEXT STEP

Discuss your environment with an architect.

Book a 30-minute architecture call or send a short description of your current environment, goals and timeline. An architect replies within one business day, and every engagement can begin with a fixed-scope assessment.
